

Five Reasons to Choose a Foot and Ankle ORTHOPAEDIC Surgeon

1

Foot and ankle orthopaedic surgeons include both medical doctors (MDs) and doctors of osteopathy (DOs). With their expertise in **whole body health**, they treat foot and ankle problems within the context of all your health needs.

2

Foot and ankle orthopaedic surgeons complete a minimum of 14 years of training, including medical school, an orthopaedic surgery residency, and a foot and ankle fellowship. You can trust that your foot and ankle orthopaedic surgeon is both **skillful and devoted** to the field.

3

Foot and ankle orthopaedic surgeons believe in **lifelong learning**. They complete continuing medical education every year with one goal in mind—to deliver the best possible care for their patients.

4

Foot and ankle orthopaedic surgeons **treat patients of all ages**. They understand everything from developmental problems in babies to conditions that tend to occur later in life. No matter what your problem is, a foot and ankle orthopaedic surgeon is the best healthcare provider to address it.

5

Foot and ankle orthopaedic surgeons don't just operate—they treat the full spectrum of **surgical and non-surgical** foot and ankle issues. If you're experiencing pain, foot and ankle orthopaedic surgeons are your go-to experts.

**FOOT AND ANKLE
ORTHOPAEDIC SURGEONS**

are MDs with the training and experience to keep your feet healthy and pain free

For the best possible care for your foot and ankle health,
